Dutching Horses for Secure Profits Daily
Introduction

In this guide, we are going to looking at dutching a selection of horses in a race that we expect to run well and of course, we expect to find one winner within those.

More often than not, we will NOT be including the favourite in this dutch bet, even though this reduces our chances of winning by 33% as the favourite is said to win 33% of their races.

HOWEVER, due to the selection process we have in place, we will only be dutching on races with favourites of odds of 3.0 and over which therefore dramatically decreases the chance of the favourite winning. Looking at past statistics, we have seen that a favourite with odds of over 3.0 wins 23.4% of the time... That’s already a reduction in risk of 10% and there’s more to it than that.

So here goes, our horse race dutching method. Give it a read... It starts on the next page!

Disclaimer: We cannot guarantee earnings of any sort from the systems enclosed within this guide book. Horse racing cannot be accurately predicted 100% of the time and results cannot be guaranteed by anyone. The systems in this guide book are to aid you in your betting and are not a guaranteed way of earning money.

The System

You will need a dutching calculator to use this method, however of course, we will provide you with a suitable link to a FREE dutching calculator so don’t worry about incurring any extra costs that you certainly weren’t expecting.

So here goes! This is our “Dutching Horses for Secure Profits Daily (that doesn’t include the favourite).

1. First of all, work your way through the races for the day until you come across the first race where the favourite is at 3.0 or greater. The higher these odds, the greater the chance of profiting. However, 3.0 is a suitable value for the odds. The favourite in this case is the horse with the LOWEST odds. You also only want to look at a race with a minimum of 6 runners.

To the right is an example of the perfect race. As you can see, our favourite, Fighting Flynn is at 3.9 and there are 7 runners in this race... PERFECT!

2. Now the next job is to look at all the other horses in the race. First of all, write down the names of the with their odds and write them from lowest odds to highest, excluding the favourite.

3. Now you need to go to click the Timeform button in yellow at the top of the page, assuming your using Betfair. If you’re not, then just go to Betfair as you don’t need to be a member to do this. The Timeform page looks like this:

What you then want to do is put a tick next to any horse that is mentioned in the top three according to the time form. In this case, we would tick Baileys Concerto and Simply Wings but not Fighting Flynn as this is our favourite and is not written down on our paper.

4. Now go to the main Timeform page HERE and browse to your race. You then want to select “Show: Racing Form” and then you want to look at the previous 3 results for each horse. Put a tick beside any horse that has had a top 3 finish. Put one tick for EACH top 3 position in the last 3 races.
5. So what do we have so far, this is what our piece of paper would look like with ticks:

<table>
<thead>
<tr>
<th>Horse</th>
<th>Odds</th>
<th>Ticks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baileys Concerto</td>
<td>4.5</td>
<td>√</td>
</tr>
<tr>
<td>Simply Wings</td>
<td>4.9</td>
<td>√</td>
</tr>
<tr>
<td>Tullyraine</td>
<td>6.6</td>
<td>√</td>
</tr>
<tr>
<td>Financial Climate</td>
<td>7.8</td>
<td>√</td>
</tr>
<tr>
<td>Judge Davis</td>
<td>17.0</td>
<td></td>
</tr>
<tr>
<td>Father Shine</td>
<td>130.0</td>
<td>√</td>
</tr>
</tbody>
</table>

6. Now remove any horses that don’t have any ticks besides there name, we have therefore crossed our Judge Davis.

7. Now you have horses to dutch. The horses with the highest number of ticks are the MUST BE DUTCHED and the horses with less are the ONLY IF YOU CAN DUTCH horses. In this case, our highest number of ticks is 2 so all horses with 2 ticks are to be dutched.

8. Go to a dutching calculator, click here, and now enter the odds for those top horses that you must dutch along with your total stake. Now if you’re showing a profit, add ONE of your “IF YOU CAN”

9. As you can see in the screenshot we have managed to dutch all our ticked horses.

10. We have therefore dutched EVERY horse besides Judge Davis and the favourite for £100 total stake. If one of these horses goes onto win then we will see a guaranteed profit of £40.11 minus any commission which is certainly not bad going.

11. If you cannot dutch all of the top ticked horses then avoid the race and move onto the next.

Fairly simple right? But that’s all there is to it. Dutching Horses can be HIGHLY profitable if you know what you’re doing and now you do!
